APPENDICES

HYDRAULICS

Oil Spillage: The quantity of fluid lost from the coupling during the connection/disconnection process.

Connection/Disconnection under pressure: Ability to connect and disconnect with the quick coupling under pressure.

Continuous service: Refers to the working temperature range

Max. operating temperature (Intermittent service): Peaks of temperature of short duration and total cumulative duration lower than 5% of the total service life.

Recommended fluids: Fluid types that the hose can convey with excellent / good chemical compatibility.

Hose service life: Cumulative duration of time in which the hose is under operative conditions.

NUT TIGHTENING METHODS

NOTE: Torque values provided are always to be considered in DRY conditions - that is, when no oil or lubrication is used on the threads or sealing surfaces.

TORQUE WRENCH METHOD

If practicable the use of a suitable, calibrated torque wrench is strongly recommended

- 1. Screw the fitting by hand on the male fitting / adaptor
- In the case of a straight fitting, whilst blocking the counter-hex with a standard wrench apply the required torque to the nut
- In the case of an elbow fitting, block the tail of the fitting with a suitable tool and then apply the required torque to the nut

FLATS / ROTATION ANGLE METHOD

If the use of a torque wrench is not possible, the flat rule (or nut rotation angle rule) can be applied.

- 1. Screw the fitting by hand on the male adaptor until the metal to metal contact between the sealing surfaces is reached
- 2. Mark the relative position between the nut and the adapter
- 3. Apply the prescribed number of flats by blocking the counterhex with a standard wrench (straight fitting) or the tail with a proper tool (elbow fitting)

WARNING

APPENDIX 620

Result from flat rule method can be affected from the operator:

- During the start phase different hand tightening to achieve the metal to metal contact can change the start position
- During the final phase marks on nut and adaptor can be not very accurate and the final position can be misread

TORQUING METHODS

In the following tables the tightening values are given according to one or more of the following methods:

ASSEMBLY TORQUE - This is the preferred and most precise method, which should be used whenever possible. Value given is the torque in N.m to be applied using a suitable calibrated torque wrench

ROTATION ANGLE - Value is the number of degrees that the nut should be rotated through AFTER metal-tometal contact is made from finger-tightening

NUMBER OF FLATS - Value is the number of flats that the nut should be rotated through AFTER metal-tometal contact is made from finger-tightening

WARNING: Compatibility of hose and fittings with conveyed fluid is an essential factor in avoiding chemical reactions that may result in release of fluids or failure of the hose or connection. This chemical compatibility guide must not be used in conjunction with any other compatibility guides from previous or future catalogue editions, bulletins or publications. Incorrect use of these charts could result in personal injury or property damage.

HOSE SELECTION BY MEDIUM AND HOSE TYPE

This hose compatibility chart is a reference of Manuli Hydraulics hose compatibility with various fluid media. It is intended as a guide to chemical compatibility with inner tube materials and assembly lubricants applied internally to the hose. The Fluid Compatibility Chart lists the relative resistance of hose tube and fitting materials to more common:

- hydraulic oils
- other diversified oils families (for hydrokinetic and lubrication applications)
- chemicals

The ratings shown do not cover all possible variations of all factors, such as temperature, concentration, degradation or fluid contamination, etc. Testing under actual conditions is the best way to assure chemical compatibility for critical applications.

PART 1: HYDROSTATIC OILS COMPATIBILITY CHART (ACTUAL HYDRAULIC SYSTEMS AND APPLICATIONS)

The specific recommendations regarding **hydraulic fluids** are based upon specific laboratory bench tests with fluids, performed according to ISO 1817 and internal methodology, integrated with field experiences and the advices of various polymers or fluid suppliers. It must be stressed, however, that this information is offered only as a guide and is not a guarantee. Final hose selection also depends upon pressure, fluid and ambient temperatures, concentration, duration of exposure and special requirements or variations, which may not be known by Manuli Hydraulics. Legal and other regulations must be followed with particular attention.

All the combined factors in working operations may impact on the service life of the hose assembly and must be carefully considered before releasing a hose for a specific application: the chemical compatibility with the service fluid is only one of the factors to be considered.

It is always recommended to test the specific fluid brand name with the requested hose, in order to verify chemical compatibility. Manuli Hydraulics constantly performs compatibility tests as service to market, progressively updating the compatibility chart.

PART 2: HYDROKINETIC APPLICATIONS AND LUBRICANT OILS COMPATIBILITY CHART (AUTOMATED TRANSMISSIONS AND VARIOUS LUBRICATION SYSTEMS)

This second part of the compatibility chart list a particular family of oils, not designed for standard hydraulics (hydrostatic applications), rather studied for many diversified applications such as lubrication for gear, compressors, turbines, diatermic oils for cooling or heat transmission, and ATF (Automatic Transmission Fluids) oils for the hydrokinetic (hydrodynamic) applications. These fluids are often very aggressive on traditional tube rubbers, more than hydraulic oils, due to the nature of the fluids and additives, aimed to give properties of long life duration and high temperature resistance; that's why their chemical compatibility with tube rubbers must be carefully checked before eventual use.

It is to be underlined that Manuli hoses are designed in principle for use with hydraulic oils only, and that diversified applications such as the ones with these categories of other oils, must be verified case by case with lab and/or field tests by users under their sole and exclusive responsibility and no liability whatsoever can be attributed to Manuli Hydraulics in that regard.

For more detailed information contact Manuli Hydraulics or visit www.manuli-hydraulics.com

PART 3: BEHAVIOUR TO CHEMICALS (GUIDELINES FROM LITERATURE) FOR NON-HYDRAULIC APPLICATIONS

WARNING: Manuli hoses are designed for hydraulics use and applications, they are not intended for industrial diversified applications with various chemicals.

The recommendations regarding generic chemicals are mainly based on literature data in conjunction with polymers used for the tube compound. The field results of the fluid conveyed in the hose should be carefully tested and field validated by users.

No test on finished hose assemblies in combination with the mentioned chemicals has been normally performed.

The possible good rating and on field performance of the hose with a chemical mentioned in the list does not mean in any case the release by Manuli Hydraulics of the product for that application or any guarantee. The possible validation for use is under the sole and exclusive responsibility of the end user and no liability whatsoever can be attributed to Manuli Hydraulics in that regard. In fact Manuli Hydraulics hoses are designed for hydraulics use and applications, they are not intended for industrial diversified applications with various chemicals.

The outer cover of the hose is intended to protect the reinforcement layer(s) from mechanical influences (abrasion, weathering etc.); cover compounds are not designed to exhibit the same chemical resistance as the tube compounds. Manuli Hydraulics should be consulted about the compatibility of the cover, should the application involve the extended exposure or immersion in a liquid: **anyway the hydraulic hoses of the Manuli Hydraulics product range are not designed in general for immersion in the service fluid.**

This type of special applications should be avoided or carefully studied with additional external protections for the hoses, selection of special hose types, e.g. with thermoplastic cover and validation on the specific application. The turbulence of the fluid, the high temperature and nature of the fluid as well as other elements may impact the properties or integrity of the hose cover material (the cover compound of the hose is designed to resist to oil drops and external agents, not immersion in the service fluid).

For more detailed information contact Manuli Hydraulics or visit www.manuli-hydraulics.com

WARNING: No tests on finished hose assemblies in combination with the mentioned chemicals has been normally performed. The possible good rating and on field performance of the hose with a chemical mentioned in the list, does not mean in any case the release by Manuli Hydraulics of the product for that application or any guarantee. The possible validation for use is under the sole and exclusive responsibility of the end user and no liability whatsoever can be attributed to Manuli Hydraulics in that regard. In fact Manuli Hydraulics hoses are designed for hydraulics use and applications, they are not intended for industrial diversified applications with various chemicals. No tests on finished hose assemblies in combination with the mentioned chemicals has been normally performed.

LEGEND OF THE HOSE TYPES BY TUBE COMPOUNDS

TUBE COMPOUND CATEGORIES	HOSE CATEGORIES	HOSE TYPES
NITRILE	STD WIRE BRAID	ROCKMASTER, HARVESTER/17, SHIELDMASTER, GOLDENISO, COVER, CRYOFLEX, TWINPOWER/4000, TWINPOWER/5000
NITRILE	STD WIRE SPIRAL	ROCKMASTER, GOLDENISO, SHIELDMASTER, ANACONDA, FOREMASTER, CRYOFLEX, DIAMONDSPIR, XTRAFLOW/4WS, HYDROROPE, HERCULES
NITRILE	HI-PER WIRE BRAID	FOREMASTER, GOLDENISO/PILOT, ROCKMASTER/1SC, SYNERGY, INFINITY
NITRILE	TEXTILE REINF.	ASTRO, SPIRTEX, MULTITEX, PUSHFIT
CHLOROPRENE		TWINPOWER/PLUS, GOLDENBLAST
CHLOROSULPHONATED POLYETHYLENE		EQUATOR/1 (BLUE & BLACK), EQUATOR/2 (BLUE & BLACK), XTRAFLOW/HT
CHLORINATED POLYETHELENE		MASTERTEX
POLYESTER		HYDROPLAST, HYDROTWIN

HOW TO USE THE CHART

- Hydraulic fluids are listed in alphabetic order with the manufacturer brand name and ISO identification symbol (DIN when available), chemicals are listed alphabetically
- Find the hose type and read the compatibility rating (see rating scale)
- Define the proper hose selection for the application by choosing the best rating

LEGEND OF RATINGS

E = **Excellent** - Small or negligible changes of compound properties: no problem for use. Service life can exceed the expectations.

G = **Good** - There are only minor changes of some compound properties. Service life is normally in line with state of the art (standard) expectations.

FT = Field Test recommended - A field test is recommended to allow the end user to either validate the selection in the actual working conditions or to reject the selection. Results of compatibility from lab testing show significant changes on some compound properties, service life can be reduced. Higher durability can be achieved with reduced severity of working conditions (temperature in particular) or with an upgraded hose selection. After the results of the recommended field test, if the end user decides to use the selected hoses under his validation, the end users assumes all responsibility with regard to any possible effects and consequences arising out of the using of hoses in the actual working conditions and Manuli Hydraulics cannot be held responsible for any claims in relation to or connected with the hoses for which it was recommended to perform a field test.

X = Not recommended - Unsuitable, severe effects on physical properties.

REMARKS

O-Rings used with couplings must also be considered for chemical compatibility with the fluid to be conveyed. This includes fittings containing internal O-Rings; for example Metric Female 24° Cone seat fittings, etc. Standard O-Ring of Manuli Hydraulics fittings are made of Nitrile rubber (NBR), highly chemically compatible with all hydraulic fluids. If you use special fluids or very high temperatures, different O-Ring materials should be used, contact Manuli Hydraulics for specific information. See Technical Manual for dimensions of O-Rings.

Compatibility of hose fittings with conveyed fluids is an essential factor in avoiding chemical reactions that may result in release of fluids and failure of the connection with the potential of causing severe personal injury or property damage. Standard Manuli Hydraulics fittings are made of carbon steel with Hexavalent chromium free plating.

OILS CLASSIFICATION - ACCORDING TO ISO 6743-4

ISO 6743-4 is an important norm regarding "Lubricants, industrial oils and related products (class L)". The norm defines a very wide family of oils, used in many different sectors and applications.

The oils must be carefully understood and properly managed to avoid problems and possible mistakes. The Part 4 of the norm in particular regards the Hydraulic Oils (Family H), for hydrostatic and hydrokinematic applications, the other parts of the norm regard other fluids, of different nature or aimed to different applications than hydraulics.

Manuli Hydraulics hoses are designed and qualified for use with Hydraulic Oils (Family H of the ISO 6743-4), and the behaviour of the particular oil formulation has to be verified case by case.

The applications with oils of the families different than H must be checked carefully but in principle Manuli Hydraulics hoses are not designed for use with them.

Here below the classification of oils by ISO 6743 spec.

Part 1: Family A (Total Loss systems)

Part 2: Family F (Spindle bearings, bearings and associated clutches)

Part 3A: Family D (Compressors)

Part 3B: Family D (Gas and refrigeration compressors)

Part 4: Family H (Hydraulic Systems)

- Part 5: Family T (Turbines)
- Part 6: Family C (Gears)
- Part 7: Family M (Metalworking)
- Part 8: Family R (Temporary protection against corrosion)
- Part 9: Family X (Greases)
- Part 10: Family Y (Miscellaneous)
- Part 11: Family P (Pneumatic tools)
- Part 12: Family Q (Heat Transfer Fluids)
- Part 13: Family G (Slideways)
- Part 14: Family U (Heat treatment)
- Part 15: Family E (Internal combustion engines)

Part 99: General

The Family H in particular, object of use with Manuli Hydraulics hoses is composed by the following families of oils, identified by ISO dedicated symbols, used also in the compatibility chart.

GENERAL APPLICATION	PARTICULAR APPLICATION	More specific Applications	COMPOSITION AND PROPERTIES	SYMBOL ISO-L
			NON-INHIBITED REFINED MINERAL OILS	нн
		(STD HYDRAULIC APPLICATIONS)	REFINED MINERAL OILS WITH IMPROVED ANTI- RUST AND ANTI-OXIDATION PROPERTIES	HL
SYSTEMS	HYDROSTATIC APPLICATIONS		OILS OF HL TYPE WITH IMPROVED ANTI-WEAR PROPERTIES	HM
			OILS OF HM TYPE WITH IMPROVED VISCOSITY/ TEMPERATURE PROPERTIES	HV
			TRIGLYCERIDES	HETG
		APPLICATIONS WHERE ENVIRONMENTALLY ACCEPTABLE FLUIDS ARE REQUESTED	POLYGLYCOLS	HEPG
			SYNTHETIC ESTERS	HEES
LIC \$			POLYALPAOELEFIN AND RELATED HYDROCARBON PRODUCTS	HEPR
RAU		HYDRAULIC SLIDE-WAY SYSTEMS	OILS OF HM TYPE WITH ANTI-STICK/SLIP PROPERTIES	HG
ПЛ			OILS IN WATER EMULSION	HFAE
			CHEMICAL SOLUTION IN WATER	HFAS
			WATER IN OIL EMULSION	HFB
			WATER POLYMER SOULTIONS	HFC
			SYNTHETIC FLUIDS CONTAINING NO WATER AND CONSISTING OF PHOSPHATE ESTERS	HFDR
			SYNTHETIC FLUIDS CONTAINING NO WATER AND OF OTHER COMPOSITION	HFDU

xxx

GENERALLY GOOD COMPATIBILITY WITH HOSES, ANYWAY THE BEHAVIOUR OF THE PARTICULAR OIL FORMATION TO BE VERIFIED CASE BY CASE

HFAS & HFDR

NO COMPATIBILITY WITH MANULI HYDRAULICS HOSES. DEDICATED HOSES ARE REQUESTED

NOTE: ATF OILS ARE NOT CLASSIFIED AS HYDRAULIC OILS

WARNING: Compatibility of hose and fittings with conveyed fluid is an essential factor in avoiding chemical reactions that may result in release of fluids or failure of the hose or connection. This chemical compatibility guide must not be used in conjunction with any other compatibility guides from previous or future catalogue editions, bulletins or publications. Incorrect use of these charts could result in death, personal injury or property damage.

WWW.MANULI-HYDRAULICS.COM

DIRECT TO PORT CONCEPTS

The male threadless termination can be connected directly to the port, by means of pre-installed cartridge, with a simple axial pushing action of the fitting into the port.

FEMALE PORT DESIGN

0175		RECOMMENDED

ASSEMBLING PROCEDURE

Fit the safety clip into the dedicated groove on the male fitting.

Connect the fitting by pushing it into the cartridge. The fitting is correctly locked and connected when the safety clip touches the cartridge.

Use a flat-headed screwdriver, or similar tool, to remove the protective cap on the cartridge.

ASSEMBLING INSTRUCTIONS

When inserting the male fitting into the cartridge, the axial force required to ensure correct and secure assembly will vary throughout the insertion process (see graph opposite). In particular there will be a two points where the amount of force required will be noticeably higher.

The first peak (A), occurs when the internal collars of the cartridge are opening; For a -08 fitting this would typically be around 20 kgf.

The second peak (B), occurs when the plastic retaining ring is being inserted into the cartridge. This peak is significantly lower than the first.

DIS-ASSEMBLING PROCEDURE

Before disconnection, ensure the system is not under pressure

Use a flat-headed screwdriver, or similar tool, to remove the safety clip.

Push the fitting in until the collar touches the cartridge, then pull out to complete the disconnection process. Use a flat-headed screwdriver, or similar tool, to remove the protective cap on the cartridge.

DIS-ASSEMBLING INSTRUCTIONS

The maximum axial force required to separate the components (after the initial "push") is approximately 10 kgf for a -08 fitting - see graph opposite.

The peak (C) represents the force required to open the internal retaining ring to allow the withdrawal of the male fitting.

ASSEMBLING PROCEDURE

Put the male insert into the adaptor.

2

Push the male insert until a "click" is heard.

Pull the insert back slightly to check that the connection has been made successfully.

DIS-ASSEMBLING PROCEDURE

.Unscrew the adaptor.

Remove the adaptor and insert as a single piece.

ASSEMBLING PROCEDURE

Put the male insert into the adaptor.

Pull the insert back slightly to check that the connection has been made successfully.

DIS-ASSEMBLING PROCEDURE

Push male insert against the internal stop

Pull the male insert out of the adaptor.

Push the male insert until a "click" is heard.

Insert a flat-headed screwdriver into one of the slots in the red sleeve to lock it in place.

O-RING AND BACK-UP RING SEAL REPLACEMENT ON FEMALE COUPLINGS

Remove the damaged O-ring and back-up ring.

Do not use sharpened tools. Take care not to damage the components.

Insert the new back-up ring.

5

Take care not to deform or scratch the back-up ring. Ensure the back-up ring is correctly located in its seat.

The replacement process is now complete.

Lubricate the seal system.

Clean the seal area.

Remove all residual parts of damaged O-ring and back-up ring.

Insert the new O-ring.

Lubricate the O-ring before inserting. Take care not to scratch the O-ring. Ensure the O-ring is correctly located in it's seat.

POLYURETHANE SEAL REPLACEMENT ON MALE FLAT-FACE COUPLINGS

Use a suitable tool to pull back the valve and hold it in place.

Do not use sharpened tools. Take care not to damage the components.

Clean the seal area.

Remove all residual parts of polyurethane seal.

Release the valve to complete the replacement process.

Lubricate the seal system.

Remove the damaged seal.

Insert the new seal.

Ensure the seal is correctly oriented. Lubricate the seal before inserting. Take care not to scratch the seal. Ensure the seal is correctly located in it's seat.

651 APPENDIX

FEMALE MULTICONNECTOR REPLACEMENT INSTRUCTIONS

Use a wrench on the lower hexagon to unscrew the old coupling

Lift out the old coupling and replace with the new part

Use a wrench on the lower hexagon to tighten the new coupling to the torque listed below

SIZE			HEX SIZE	TIGHTENING TORQUE
DN	Inch	Dash	mm (AF)	Nm
10	3⁄8	06	30	60
12.5	1⁄2	08	36	90
19	3/4	12	41	150
25	1	16	50	250

MALE MULTICONNECTOR REPLACEMENT INSTRUCTIONS

Use a wrench on the lower hexagon to unscrew the old coupling

Lift out the old coupling and replace with the new part

Use a wrench on the lower hexagon to tighten the new coupling to the torque listed below

SIZE			HEX SIZE	TIGHTENING TORQUE
DN	Inch	Dash	mm (AF)	Nm
10	3⁄8	06	30	60
12.5	1⁄2	08	36	100
19	3/4	12	42	150
25	1	16	50	250

MULTICONNECTOR COVER REPLACEMENT INSTRUCTIONS

Unscrew the fixing screws and remove the old cover.

1

Place the new cover on the face of the fixed part and insert the screws into the positions shown.

Tighten each screw to the torque listed below.

SCREW	HEX SIZE	SOCKET SIZE	Tightening Torque
	mm (AF)	mm (AF)	Nm
А	-	5	5
В	9	-	5

HOSE

Family

"Five digit number" that defines a specific hose family - see "Hose Family Table".

Digit "1"	Ноѕе Туре	Digits "1-2"	Hose Type
0	Hydraulic rubber hose	10	Hydraulic rubber hose
2	Thermoplastic hose	16	Textile braided - Traded
3	Traded hose		
7	Oil & marine hose		
8	Industrial hose		
9	PTFE hose		

Progressive letter (A, B, ...) is used to identify an updated structure

In case a **number** is used, it must be read together with digits "7" and "8" to identify the hose's diameter in mm

Diameter in millimetres

In case digit "6" is a number, the hose diameter in millimetres should be read including it.

13	3 Flange counter-ring for "Caterpillar" insert 29		Interlock Plus O-Ring		
14	Seal type for SAE 3000 and 6000 PSI 30 One-piece Polyurethane seal for Staple			One-piece Polyurethane seal for Staple	
15	Support plastic ring (open ring) 31 One-Piece Polyurethane seal for Staple			One-Piece Polyurethane seal for Staple	
16	kit bonded sea	al rings			

RING & SEAL (CONTINUED)

The numbers in these positions indicate the external diameter in mm.

The numbers in these positions indicate the internal diameter in mm.

The numbers in these positions indicate the axial thickness in mm.

INCORRECT USE

CORRECT USE

- Avoid twisting the hose assembly when installing.
- Avoid situations where moving parts will cause twisting effects on the hose assemblies after installation.

- Select the correct fittings to avoid tight bend radii.
- Ensure a minimum distance of 1.5 x "d" after the ferrule before hose bending.

INCORRECT USE

CORRECT USE

- Avoid interference with objects that can cause abrasion or damage to the hose.
- In flexing applications ensure that the hose is not subjected to tensile stresses or to impacts / abrasion from the surrounding environment.

The Manuli hydraulic hose product range is not designed for immersion in the service fluid. This type of special application should be avoided or carefully studied with reference to the hose specifications

For detailed information concerning recommended practices for hydraulic hose assemblies, please refer to SAE J1273 and ISO/TS 17165-2. This document should be used as a guide when selecting, routing, fabricating, installing, replacing, maintaining and storing hose for hydraulic systems.

PRODUCT SELECTION AND INSTALLATION

The information in this document concerning hoses, fittings and other items manufactured and provided by Manuli Rubber Industries and its subsidiaries, is provided for the express purpose of aiding in the correct selection of products for particular applications. However it is the responsibility of the customer to ensure that they consider the specific details of the application during the selection process.

Important factors to consider include:

- Hose size
- Hose length
- · Fluid compatibility
- · Ambient and operating temperatures
- System operating pressures
- Static head pressures
- Installation design
- Minimum bend radii
- · Possible abrasion of the hose
- Movement and flexing of the hose during operation

Improper selection and / or installation of hydraulic hose assemblies can result in reduced assembly life, equipment failure, property damage, bodily injury or death.

HOSE INTEGRATION

Manuli hoses and fittings are designed to be part of an integrated hose assembly system. As such they should only be used together or in conjunction with other types of fittings recommended by Manuli Rubber Industries and its subsidiaries. Failure to observe these requirements may result in a reduced lifespan of the hose assemblies or other failures which can cause equipment failure, property damage, bodily injury or death.

Manuli provides guidelines for the proper assembly, installation, maintenance and use of its products and further information on recommended practices is available in SAE J1273 and ISO/TS 17165-2.

Should you have any questions regarding proper assembly, installation or application usage of any Manuli product, please contact our Technical Centre in Italy.

WARNING!

Improper selection or use of any of the products found in this document may result in property damage, bodily injury or death. Consider all aspects of your application carefully to ensure that the products selected are the most appropriate for the task.
